Uptime SLA

ISO 27001

Aligned

🔒 STRICTLY CONFIDENTIAL

The Problem: What FCCPC Operates Without Today

Nine critical institutional gaps that create accountability, efficiency, and compliance deficits

No Activity Tracking

Zero standardised record of daily staff output. Reviews based on impressions, not evidence.

Manual Task Management

Tasks assigned verbally. No lifecycle tracking. Critical work falls through institutional cracks.

Unequal Workload

Some staff chronically overloaded, others underutilised. No data to redistribute equitably.

No Measurable KPIs

Targets set without traceability. No institutional record of KPI achievement at any level.

Zero Audit Trail

Decisions, approvals, and actions leave no tamper-proof record. Serious compliance risk.

Paper Leave Management

Leave via paper forms, manual chains, verbal confirmations. No searchable history.

No Executive Intelligence

EVC has no platform to privately review director performance or access a health score.

Fragmented Directory

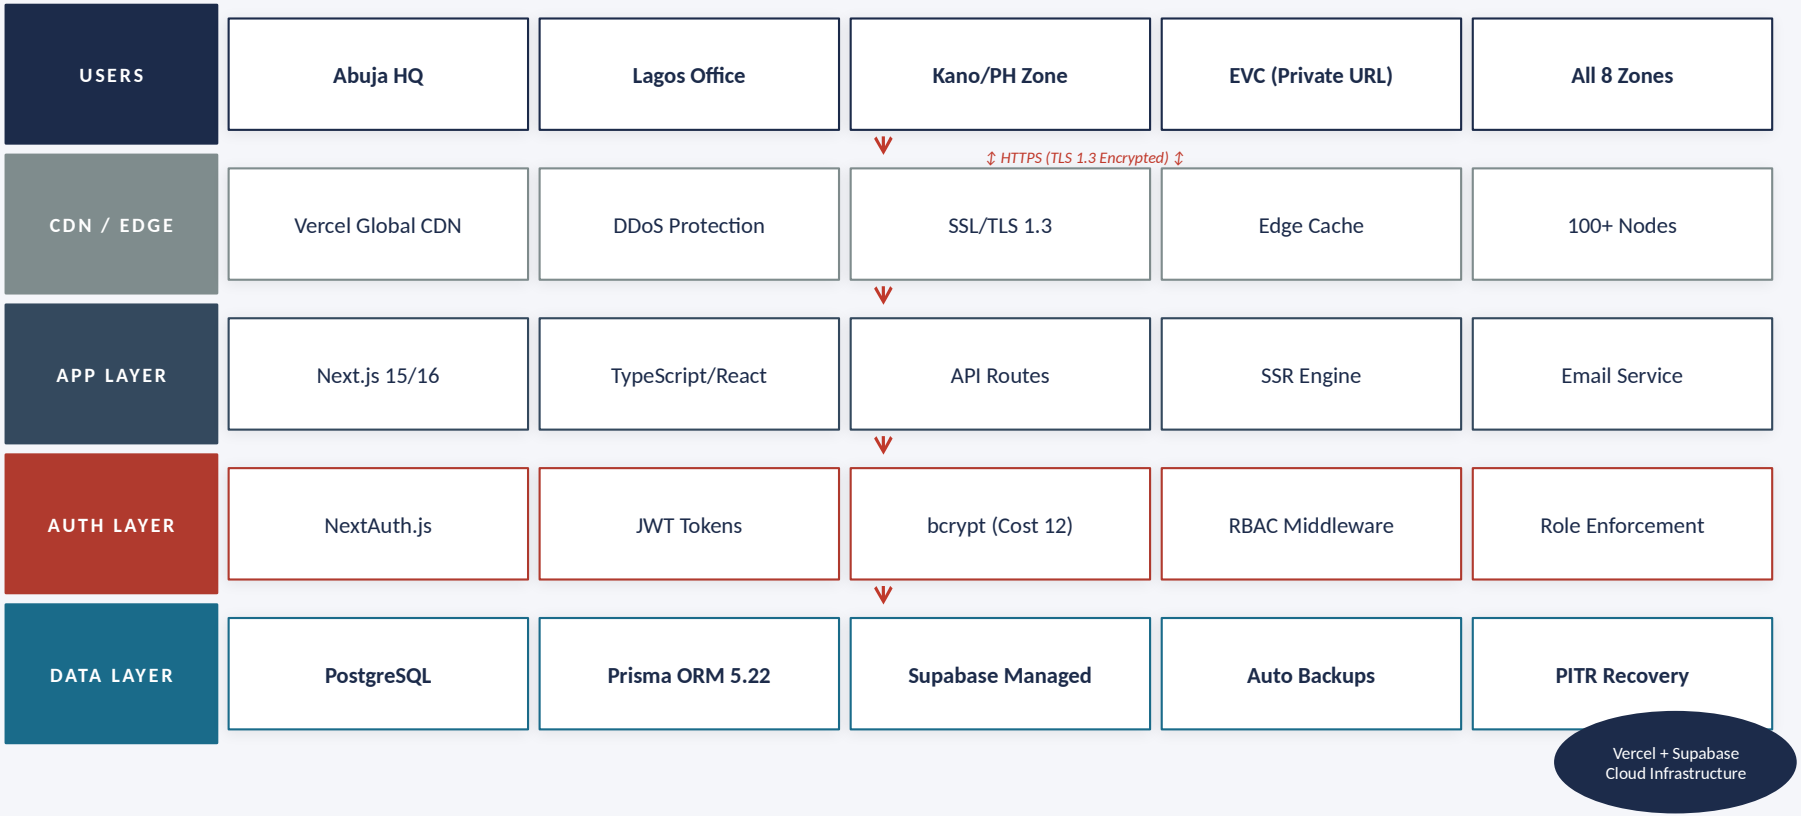

Staff contacts maintained in personal phone books or shared Excel sheets. No authority.

Uncontrolled Payments

Payment requests via informal email chains. No routing, no approval history, no visibility.

System Architecture

Cloud-native serverless stack — zero infrastructure management required by FCCPC

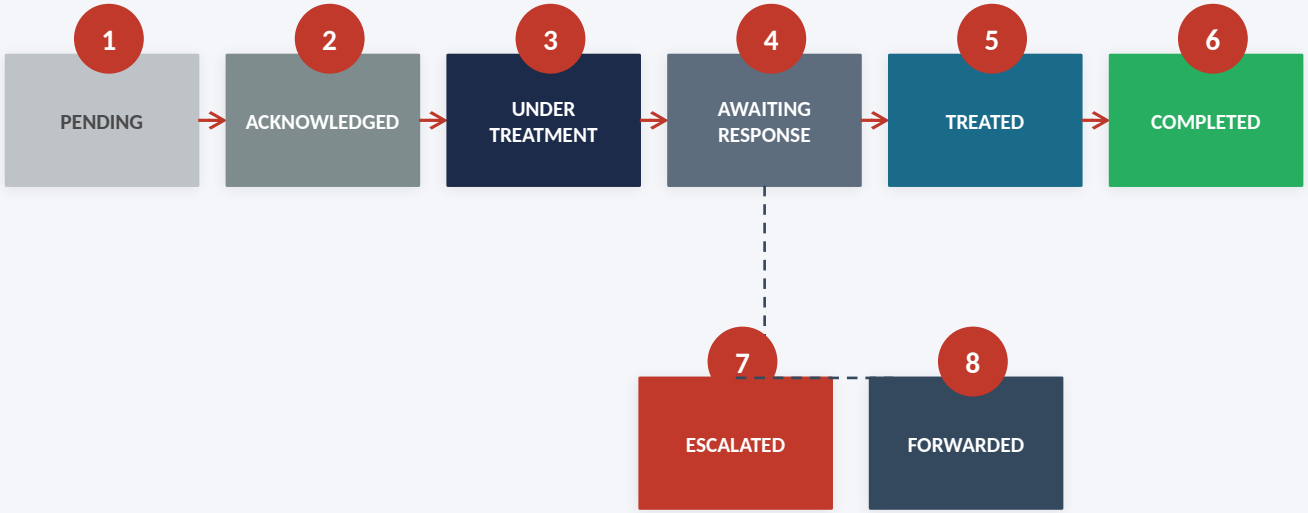

System Modules: 18 Purpose-Built Capabilities

Every module designed specifically for FCCPC operational workflows

Task Lifecycle: 8-Stage Treatment Pipeline

Every task tracked from creation to completion — no task falls through the cracks

Task Reference ID

TK-A4M9B2P3X7

10-char collision-resistant alphanumeric ID
excludes ambiguous chars: 0, O, I, 1

PRIORITY LEVELS

LOW | MEDIUM | HIGH | CRITICAL

Security Architecture

11-Layer Defence-in-Depth | ISO 27001 · NDPR · NIST Aligned

Double Authentication
`ISO A.9.4.2`

EVC suite: standard login + private access code — completely independent

Secret URL Architecture
`NIST PR.AC-3`

Non-guessable URL, no sidebar link, no navigation entry anywhere in system

Server Middleware RBAC
`ISO A.9.1.2`

JWT role verified server-side on every request — no frontend bypass possible

Silent Redirect
`OWASP ASVS 1.4`

Non-executive users silently redirected — zero information leakage

Three-Attempt Lockout
`NIST SP 800-63B`

Incorrect access code → 30-second lockout, no bypass, brute-force resistant

15-Min Executive Auto-Lock
`ISO A.11.2.8`

Suite auto-locks on inactivity without terminating main session

Download Password Guard
`NDPR Section 2.4`

Every vault file download requires access code re-entry — no automation

Audit Invisibility (EVC)
`ISO A.12.4.3`

EVC silent profile views create zero audit log entries

HTTP 404 on Sensitive Routes
`OWASP API Top 10`

Sensitive routes return 404, not 401/403 — route enumeration impossible

bcrypt (Cost Factor 12)
`NIST SP 800-131A`

Passwords cryptographically hashed — irreversible even if DB is breached

Configurable Session Timeout
`NIST SP 800-63B`

60-second warning dialog before forced logout — 10min to never range

Role-Based Access Control Matrix

Server-enforced access across 7 roles — enforced at middleware level, not frontend

	STAFF	INTERN	SUPERVISOR	DIRECTOR	HR	ADMIN	EXECUTIVE

AI Performance Intelligence: Composite Scoring Model

4 objective system metrics eliminate supervisory bias from appraisals

METRIC 1

Log Frequency

25%

Logs submitted ÷ Working days × 100

METRIC 2

Approval Rate

25%

Approved logs ÷ Total submitted × 100

Composite Score

0–100

pts

METRIC 3

Quality Score Average

25%

Mean supervisor ratings 1–5, normalised to 0–100

METRIC 4

Output Volume

25%

Tasks completed ÷ Dept average × scaling factor

SCORE INTERPRETATION

90–100	75–89	60–74	45–59	0–44
Outstanding	Exceeds Expectations	Meets Expectations	Below Expectations	Unsatisfactory

EVC Command Suite

🔒 EYES ONLY — EVC

Private Executive Intelligence Dashboard — Double Authentication Required

1. SYSTEM LOGIN (Standard Credentials)
2. PRIVATE ACCESS CODE (EVC Eyes-Only)
3. **SUITE UNLOCKED (15-min auto-lock)**

Revenue Intelligence

Full revenue visibility with approval workflow and trend monitoring

Director Performance Monitor

Private view of all director KPIs, tasks, and activity scores

Promotion Recommendation

Data-driven candidates ranked by 4-metric objective scoring

Encrypted Notes Vault

Confidential annotations — accessible only to EVC, never audited

Private File Vault (50MB)

All formats. Download requires code re-entry. Zero API exposure.

Commission Health Score

Live 0–100 composite institutional health score in real-time

EVC Task Assignment

Direct task assignment to any staff or director from suite

Silent Staff Profile View

Review any profile — zero audit entry created; staff unaware

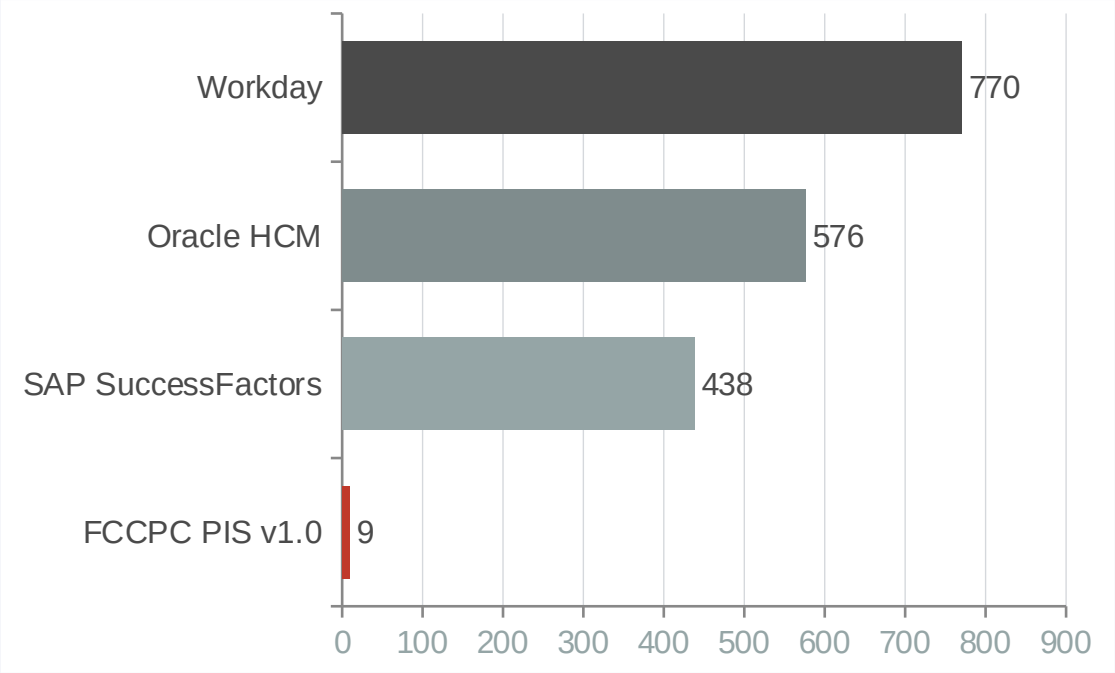

Confidential Annotations

Private marginal notes on staff, directors, or directorates

Total Cost of Ownership: 3-Year Analysis

FCCPC PIS vs commercial enterprise alternatives

FCCPC PIS 3-Year Cost
₦9.3M
$5,800 USD equivalent

SAP SuccessFactors
₦438M
$273,000 USD equivalent

Oracle HCM
₦576M
$360,000 USD equivalent

Workday
₦770M

ESTIMATED 3-YEAR SAVINGS vs CHEAPEST ALTERNATIVE:
₦223M – ₦635M

Implementation & Deployment Plan

Commission-wide deployment achievable in 7 weeks from approval

01 → 02 → 03 → 04

Weeks 1–2

Foundation

- Admin access provisioning & EVC suite configuration
- Org structure: directorates, zones, departments
- Director & Dept Head accounts created
- KPI templates configured per directorate

Weeks 3–4

Leadership Onboarding

- Training: all Directors & Supervisors (zone-by-zone)
- Task Management & Daily Log workflows demonstrated
- Load Balancer and reporting tools walkthrough
- System fine-tuning from management feedback

Weeks 5–6

Full Staff Rollout

- All staff accounts created, credentials via email
- Group training by department (1.5 hrs/group)
- Daily Work Log submissions go live
- Leave Management & Announcements activated

Week 7

EVC Activation

- EVC Command Suite URL & access code (in-person only)
- Revenue Intelligence configured with current data
- Commission Health Score baseline established
- 30-day post-launch adoption report presented

Technology Stack Justification

Every component chosen for enterprise reliability, security, and Nigerian government context

FRONTEND FRAMEWORK

Next.js 15/16

SSR for security, zero exposed keys, built-in API routes, edge deployment. Used by Netflix, TikTok, Twitch.

TYPE SAFETY LAYER

TypeScript

Catches bugs at compile time. Reduces runtime errors by up to 38% (Microsoft Research). Enterprise standard.

DATABASE ENGINE

PostgreSQL

ACID compliant, open-source, used by Apple, US Government. Superior to MySQL for relational integrity.

DATA ACCESS LAYER

Prisma ORM 5.22

Type-safe queries, blocks SQL injection at framework level. Automatic schema migrations, OWASP A03 compliant.

AUTHENTICATION

NextAuth.js + JWT

Battle-tested, cryptographically signed tokens (HMAC-SHA256). Stateless, scalable, OWASP auth guidelines compliant.

DEPLOYMENT PLATFORM

Vercel

99.99% uptime SLA. 100+ global edge nodes. Automatic HTTPS, DDoS protection. Zero server management required.

MANAGED DATABASE HOST

Supabase

SOC 2 Type II certified. Automatic daily backups, Point-in-Time Recovery. Enterprise data residency standards.

PASSWORD SECURITY

bcrypt (Cost 12)

Industry standard for password hashing. Computationally expensive by design. NIST SP 800-131A compliant.

UI COMPONENT LAYER

React 18

Meta-maintained, 20M+ weekly downloads. Concurrent rendering, accessibility primitives, massive ecosystem.

The Decision Is Clear

What FCCPC Gains — Starting Day 1

100%

Digital audit trail coverage — every action

₦223M+

Saved vs cheapest alternative (3 yrs)

6 Weeks

Full commission-wide deployment

0 Paper

Leave, appraisal & task processes fully digital

Capabilities FCCPC Gains

- First-ever objective performance ranking
- Tamper-proof immutable audit trail
- Executive intelligence no Nigerian agency has
- AI-driven promotion recommendations
- Real-time commission health monitoring

Problems That Disappear

- Ghost workers impossible to hide
- Lost tasks become a thing of the past
- Subjective appraisals replaced by data
- Paper-based processes fully eliminated
- Unequal workloads become visible instantly

What Happens Without It

- Accountability gaps persist indefinitely
- NDPR compliance risk remains unaddressed
- Competitors in regulation stay ahead
- Manual appraisals continue to cost HR 60% overhead
- EVC operates without institutional intelligence
